DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 22, 2005 has been entered.

Claims 23-26, 28-31, 34-36 and 55-67 are currently pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 56-66 are rejected under 35 U.S.C. 102(b) as being anticipated by the Japanese publication of Suzuki et al. (JP 07-280944, published October 27, 1995).

Regarding claims 56-66, Suzuki et al. disclose (see Figs. 2 and 9) an imaging apparatus, comprising: a photoelectric conversion device (CCD sensor 24) having a plurality of photoelectric conversion elements on a panel (substrate 23); a wavelength converting member (fluorescence plate 26) arranged on the photoelectric conversion elements; a grounded conductive member (conductive member 22) arranged on (space between members are filled with insulating rubber; see paragraph 0040) the wavelength

converting member; and a resin (containers 40 and 45 made of resin; see paragraph 0055) that seals at least a portion of the panel and at least a part of an end face of the conductive member wherein the panel and the conductive member are in close proximity with each other. Suzuki et al. also disclose (see paragraph 0037) the conductive member is aluminum, the conductive member extends out (see Fig. 3) as claimed, and the thickness is 100 microns or less (.01mm; see paragraph 0037).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 23-26, 28-31, 34-36, 55 and 67 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al. in view of Crowell et al. (U.S. Patent 5,804,832).

Regarding claims 23-26, 28-31, 34-36, 55 and 67, Suzuki et al. disclose the claimed invention as set forth above. Suzuki et al. further disclose (see Fig. 2) a housing (container 20) as claimed. Suzuki et al. do not specifically disclose a plurality of substrates as claimed. Crowell et al. teach (see Fig. 4) making a larger photoelectric conversion device with a plurality of substrates arranged adjacent to each other. Thus, Crowell et al. recognize that larger sensors can be obtained by using a plurality of substrates as claimed. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide a plurality of substrates arranged

adjacent to each other in the apparatus of Suzuki et al. in view of Crowell et al. to cost effectively obtain larger image sensors for more comprehensive imaging.

Response to Arguments

6. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
